EXPERIENCE

Software Engineer, Backend Apr 2026 – Oct 2026
Redstring *Remote*

- Built a fault-tolerant AI recruiter agent with leased workers and a transactional outbox, enabling crash recovery, cancellation, and live progress updates.
- Implemented payment and seat-limit workflows with signed webhooks, idempotency keys, and atomic reservations to prevent duplicate quota usage.
- Developed a multi-tenant recruiting backend in TypeScript, Hono, tRPC, and PostgreSQL with organization-level isolation and role-based access control.
- Automated AWS deployments with Docker and GitHub Actions, including database migrations, health checks, and rollback procedures.

PROJECTS

Docks docks.devzshrc.in
Next.js, TypeScript, Hono, tRPC, PostgreSQL, OpenAI, Cloudflare Workers

- Built a GitHub pull-request review workspace with an inbox, diff review, comments, approvals, follow-up issues, deadline policies, and reviewer escalation.
- Implemented AI review guides and code Q&A with commit-keyed caching and diff-line-validated citations, bounding context to 40,000 characters and five changed files.
- Processed pull requests in batches of up to 100 files with a concurrency cap of three; added size limits, per-user AI quotas, stale-request recovery, and signed webhook verification.

Orbiter yc.devzshrc.in
React, TypeScript, Hono, PostgreSQL, Drizzle, OpenAI, Groq, Cloudflare Workers

- Built a startup job-search and recruiting platform with job discovery, application tracking, recruiter postings, and configurable hiring forms with shared validation.
- Developed an AI sourcing workflow to evaluate candidates against recruiter criteria and queue leads for approval; daily runs scan up to 200 candidates by default with atomic scheduling and budget controls.
- Implemented explainable 0–100 resume matching across skills, experience, domain, remote, and visa signals; ranked jobs by freshness, match, and employer responsiveness.
- Cached rate-limited job-provider results in PostgreSQL with configurable refresh windows, request budgets, and fallback to saved data.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python
Backend & Data: Node.js, Bun, Hono, Express, tRPC, PostgreSQL, Redis, REST APIs, SSE
Infrastructure: AWS, Docker, GitHub Actions, Cloudflare Workers
Frontend & AI: React, Next.js, OpenAI API

EDUCATION

B.Tech in Computer Science, BBA University, Lucknow 2021 – 2025

CERTIFICATIONS & AWARDS

- 100xDevs Full Stack certification.
- 16th place, Chaicode Hackathon – AI form builder.
