## EXPERIENCE

**Software Engineer, Backend** Apr 2026 – Present
Redstring *Remote*

- Built an AI recruiter agent with crash recovery, cancellation, and live updates using a transactional outbox and leased workers.
- Integrated payments and seat limits using signed webhooks, idempotency keys, and atomic reservations to prevent duplicate quota usage.
- Built a recruitment backend with TypeScript, Hono, tRPC, and PostgreSQL, implementing organization-level data isolation and role-based access control.
- Automated AWS deployments with GitHub Actions and Docker, including database migrations, health checks, and rollback.

## PROJECTS

**Docks** docks.devzshrc.in
*Next.js, TypeScript, Hono, tRPC, PostgreSQL, OpenAI, Cloudflare Workers*

- Implemented AI review guides and code Q&A with commit-keyed caching and citations validated against diff lines; bounded full-file context to 40,000 characters and up to five changed files.
- Processed large pull requests in batches of up to 100 files with concurrency capped at three; added size-based limits, per-user AI quotas, stale-request recovery, and signed webhook verification.
- Built a GitHub pull request review platform with an inbox and diff workflow supporting comments, approvals, follow-up issues, deadline policies, and reviewer escalation.

**Orbited** yc.devzshrc.in
*React, TypeScript, Hono, PostgreSQL, Drizzle, OpenAI, Groq, Cloudflare Workers*

- Built an AI sourcing workflow that evaluates candidates against recruiter criteria and queues leads for approval; daily runs scan up to 200 candidates by default, with atomic scheduling and budget controls.
- Implemented explainable 0–100 resume matching using skills, experience, domain, remote, and visa signals; ranked jobs using freshness, match, and employer responsiveness.
- Cached rate-limited job-provider results in PostgreSQL with configurable refresh windows, request budgets, and fallback to saved data.
- Built a startup job search and recruiting platform with job discovery, application tracking, recruiter postings, and configurable hiring forms with shared client-server validation.

## SKILLS

| | |
|---|---|
| **Languages** | TypeScript, JavaScript, SQL, Python |
| **Backend and Data** | Node.js, Bun, Hono, Express, tRPC, PostgreSQL, Redis, REST APIs, SSE |
| **Infrastructure** | AWS, Docker, GitHub Actions, Cloudflare Workers |
| **Frontend and AI** | React, Next.js, OpenAI API |

## EDUCATION

**B.Tech in Computer Science**, BBA University, Lucknow 2021 – 2025

## CERTIFICATION AND AWARDS

- 100xDevs Full Stack certification.
- 16th place, Chaicode Hackathon — AI form builder.
