EDUCATION

B.Tech in Computer Science, BBA University, Lucknow 2021 – 2025

SKILLS

Languages	TypeScript, JavaScript, SQL, Python
Backend and Data	Node.js, Bun, Hono, Express, tRPC, PostgreSQL, Redis, REST APIs, SSE
Infrastructure	AWS, Docker, GitHub Actions, Cloudflare Workers
Frontend and AI	React, Next.js, OpenAI API

EXPERIENCE

Software Engineer, Backend Apr 2026 – Present
Redstring *Remote*

- Built a recruitment backend with TypeScript, Hono, tRPC, and PostgreSQL, implementing organization-level data isolation and role-based access control.
- Integrated payments and seat limits using signed webhooks, idempotency keys, and atomic reservations to prevent duplicate quota usage.
- Built an AI recruiter agent with crash recovery, cancellation, and live updates using a transactional outbox and leased workers.
- Automated AWS deployments with GitHub Actions and Docker, including database migrations, health checks, and rollback.

PROJECTS

Docks docks.devzshrc.in
Next.js, TypeScript, Hono, tRPC, PostgreSQL, OpenAI, Cloudflare Workers

- Built a GitHub pull request review platform with an inbox and diff workflow supporting comments, approvals, follow-up issues, deadline policies, and reviewer escalation.
- Implemented AI review guides and code Q&A with commit-keyed caching and citations validated against diff lines; bounded full-file context to 40,000 characters and up to five changed files.
- Processed large pull requests in batches of up to 100 files with concurrency capped at three; added size-based limits, per-user AI quotas, stale-request recovery, and signed webhook verification.

Orbited yc.devzshrc.in
React, TypeScript, Hono, PostgreSQL, Drizzle, OpenAI, Groq, Cloudflare Workers

- Built a startup job search and recruiting platform with job discovery, resume matching, application tracking, recruiter postings, and configurable hiring forms with shared client-server validation.
- Implemented explainable 0–100 resume matching using skills, experience, domain, remote, and visa signals; ranked jobs using freshness, match, and employer responsiveness.
- Built an AI sourcing workflow that evaluates candidates against recruiter criteria and queues leads for approval; daily runs scan up to 200 candidates by default, with atomic scheduling and budget controls.
- Cached rate-limited job-provider results in PostgreSQL with configurable refresh windows, request budgets, and fallback to saved data.

CERTIFICATION AND AWARDS

- 100xDevs Full Stack certification.
- 16th place, Chaicode Hackathon — AI form builder.
